

### Private washrooms

In sanitary installations for public use stainless steel is valued most of all for its hygienic benefits and durability. When choosing and designing private bathrooms, however, factors such as the versatility and attractiveness of the material take on additional importance. The sheer variety of tap fittings and sanitary products in stainless steel available on the market is a demonstration of this functionality and adaptability. Accessories like mirror-fronted cupboards, soap holders and towel rails in stainless steel add a touch of quality and elegance to many bathroom designs.
