

## Wind Shelter

This magnificent sculpture was created using duplex stainless steel and can be found on the South Shore Promenade in Blackpool, England. The sculpture is based on a turntable and revolves with the wind to provide constant protection against the elements. The artist imagined the interaction of a weather-vane, which turns the structure, and a baffle that provides shelter from the wind. The sculpture is eight metres tall and is based on a turntable with a four metre diameter, incorporating dampers to control the speed of rotation. The striking design mirrors a whale's tail, and it's appropriate sitting next to the sea required very particular attention to the specification of the stainless steel to give it a robust resistance to corrosion in an aggressive sea-side environment.

### Details

<b>Location:</b>	Blackpool, England
<b>Grade:</b>	EN 1.4462
<b>Architect:</b>	Ian McChesney
